

Amendments to the Specification:

Please replace original specification paragraph [0018] with the following amended paragraph:

[0018] As described above, when the new system call 109 notifies the loadable kernel
5 module [[100]] 110, the call determining unit 144 of the loadable kernel module [[100]]
110 first determines whether the new system call 109 is one of the predetermined system
calls, such as SYS_RMDIR, SYS_MKDIR, SYS_RENAME, SYS_LINK,
SYS_CHMOD, etc. If yes, the message processing unit 116 generates a corresponding
file modification message including at least the filename and path of the modified file, to
10 the scheduling module 120. If no, the system call is ignored and the process is terminated.
